Mityvac® MV4560 Cooling System Pressure Test Kit

Available in July 2010, the new Mityvac MV4560 Cooling System Pressure Test Kit is a reliable and convenient tool for pressure testing automotive cooling systems and cooling system caps.

Cooling system leaks are a major cause of overheating that can lead to serious engine damage. Many leaks can be fixed by simply tightening a clamp or replacing a hose, while others require a complete engine overhaul. No matter the cause of the leak or how minor it is, it will affect the ability of the cooling system to cool the engine, and should be diagnosed and repaired as quickly as possible.

The MV4560 makes diagnosing and pinpointing cooling system leaks simple, reliable and affordable. It combines a Mityvac hand pressure pump with four custom cooling system adapters selected and designed to connect to the vast majority of U.S. and Asian manufactured vehicles, including motorcycles, ATVs, snowmobiles, and other utility equipment. It also includes adapters to test the cooling system caps.

The simplicity of the MV4560 design makes it affordable for every professional or home mechanic. The custom adapters fit like the original caps to ensure reliable, repeatable test results, and the color illustrated gauge face makes for a simple, easy to understand diagnosis.

See the chart below for pricing. For more details, refer to Lincoln/Mityvac sales flyer number 444045, or go to mityvac.com for additional information and to download images.

Model No.	Description	Product Code	U.S. Sugg. User Price	UPC Code
